AIM: Coin Animation (Unity)

1. Download coin image

- Get a coin sprite sheet (image with multiple frames of the coin at different rotations).

2. Import into Unity

- Drag and drop the image into the **Assets** folder.

3. Select the coin image in Assets → Inspector

- Change **Texture Type** = **Sprite (2D and UI)**
- Change **Sprite Mode** = **Multiple** (because the coin sheet has multiple frames).
- **Install 2D Sprite Package** (very common fix)
Go to **Window → Package Manager**
Search for **2D Sprite**
If it's not installed, click **Install**
After that, the **Sprite Editor** button will appear in Inspector

○

4. Open Sprite Editor

- Click **Sprite Editor** → Maximize → choose **Slice** → **Apply**
- This cuts the coin sheet into multiple individual frames.

5. Drag and Drop the coin sprite into Scene

- This adds it as a GameObject (a visible coin).

6. Create Animation

- Select the coin sprite in the Scene.
- In the top menu: **Window → Animation → Animation**
- Create a new animation (e.g., CoinAnimation).
- Drag the sliced coin frames into the Animation timeline → Unity will auto-animate them.

7. Play the Scene

- Click  Play, and you'll see the coin spinning/animating.
