

Practical No. 08

Aim : Create infinite background scrolling

Step 1: Create the Background Plane

1. In **Hierarchy** → **Right-click** → **3D Object** → **Plane**.
2. Rename it **Background**.
3. Set **Transform Position** exactly:
4. $X = 0, Y = 0, Z = 0$
5. Scale it if needed (for example, Scale = 10, 1, 10) so it's big enough to fill the camera view.

Tip: Always use **Edit Mode** — don't create objects during Play Mode. Otherwise, they disappear when you stop.

Step 2: Create a Material for the Plane

1. In **Project window** → **Right-click** → **Create** → **Material** → name it BG_Mat.
2. Download any image from google save it and drag it inside the assets.
3. In **Inspector**, drag and drop the background to **Base Map** (for example: grass, bricks, or any background image).
4. Drag **BG_Mat** onto your **Background Plane**.

Step 3: Set Texture Tiling

1. Select BG_Mat.
2. In **Inspector** → **Tiling**, set:
3. $X = 5, Y = 5$
 - This makes the texture repeat nicely so it looks like continuous background.

Step 4: Create the InfiniteScrolling Script

1. In **Project** → **Assets** → **Right-click** → **Create** → **C# Script** → Name it InfiniteScrolling.
2. Open the script and replace all code with:

```
using UnityEngine;

public class InfiniteScrolling : MonoBehaviour
{
    public float speed = 0.2f; // Speed of scrolling
    [SerializeField] private Renderer bg; // Renderer of the plane

    void Update()
    {
        bg.material.mainTextureOffset += new Vector2(speed * Time.deltaTime,
0);
    }
}
```

Tip:

- speed controls how fast it scrolls.
- new Vector2(speed * Time.deltaTime, 0) → scrolls horizontally. Change to (0, speed * Time.deltaTime) for vertical scrolling.

Step 5: Attach the Script to the Background

1. Select **Background Plane**.
2. In Inspector → **Add Component** → **InfiniteScrolling** → **Bg**,
3. In Inspector → **InfiniteScrolling** → **Bg**, drag the **Background's Mesh Renderer** (game object of plane in the rename of background) into that slot.

Step 6: Position the Camera

1. Select **Main Camera**.
2. Set **Transform** exactly:
3. Position: X = 0, Y = 5, Z = -10

Rotation: X = 30, Y = 0, Z = 0

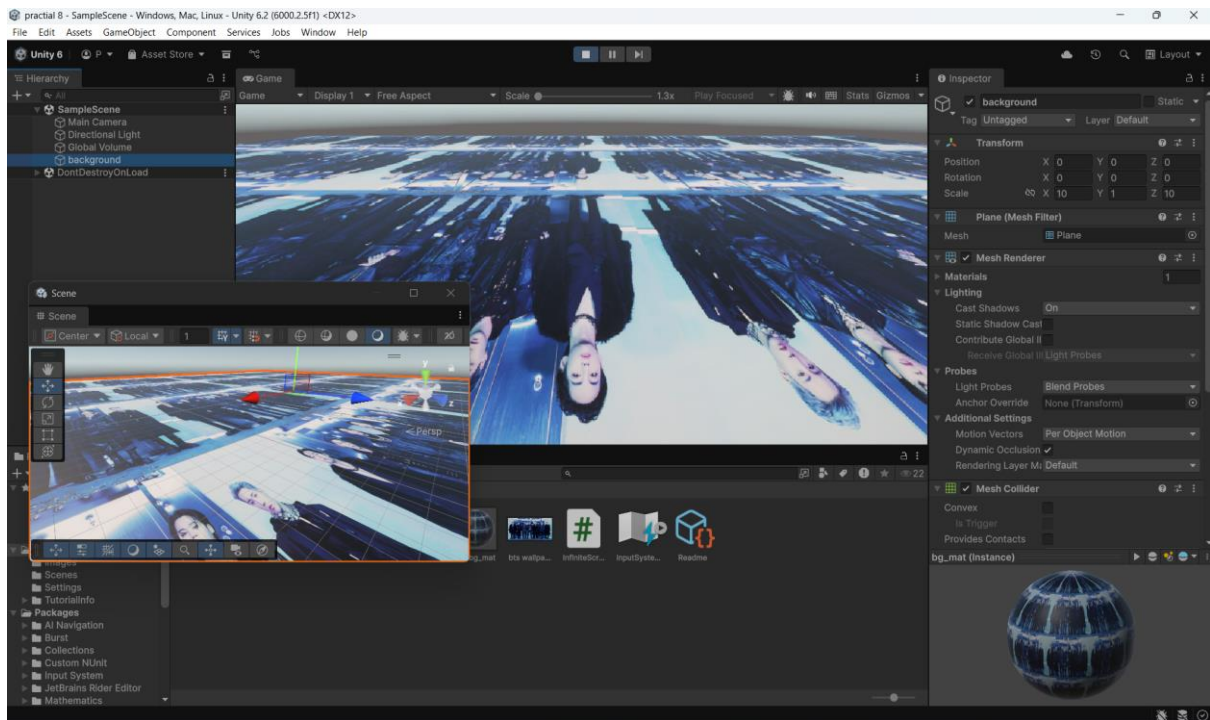

Step 7: Test the Scrolling

1. Press **Play** .
2. In the Game window, you should see the background **scrolling infinitely**.
